PROFESSIONAL SUMMARY

Result-Oriented Software Developer with 7+ years of experience in developing and supporting mobile software solutions from inception to deployment. Skilled in managing products throughout the development lifecycle, delivering product on time, and providing effective mentorship to junior developers. Known for a proactive approach to problem-solving and a commitment to consistently deliver high quality results with best practices.

WORK EXPERIENCE

Senior Android Developer – Card Payment Solution , 2024 - Present
Moneta Technology - Abuja, Nigeria.
- Responsible for the development of Credit cards processing sdk and plugins.
- Integrated with Card Processing switch platforms, using the international standard for financial transaction data exchange (ISO8583).

Senior Android Developer – Mobile Bill Payment Application, 2023
Kaduna Electric Plc - Kaduna, Nigeria.
- Developed a mobile cashless bill payment solution for the state electricity company, designed for EMV-enabled Android terminals. The application facilitates credit card payments, integrating seamlessly with payment gateways and card-switching platforms for secure transactions.
- Trained junior developers on the Android team to maintain the maintainable and sustainable solutions

Senior Android Developer – Mobile Banking Application, 2021
Jaiz Bank Plc - Abuja, Nigeria.
- Responsible for the entire development process of the bank's mobile banking application. Android Mobile app used for card payment and bills processing, it's written in Java and Kotlin, using the latest software architecture standards and design patterns. It has been one of the most challenging undertakings of my career so far.
- I handled the full integration with the core banking system and third parties APIs.

Software Developer (Android and API Development) – Biometric Verification Solution, 2018
Stetis Ltd - Abuja, Nigeria.
- Developed an application for Biometric enabled Android terminal to facilities student biometric verification for examinations over 16,000 examination centers. The entire mobile application was written in Java.
- Designed and implemented the backend service using spring boot framework.

Java Developer (Desktop Application) – Student Data Capture, 2015
Bizzdesk Global Solutions Ltd - Abuja, Nigeria.

- Developed a desktop application using JAVAFX for Students' Biometric and Bio-data capture for examination registration.
- Developed the backend services with JAVAEE

INDEPENDENT PROJECT

JTFish – Developed a comprehensive customer order management solution entirely in Kotlin, designed to streamline the ordering and delivery process of fish and chips within the city. The mobile application receives orders placed by customer via the web application. Integrated order processing features to manage each stage, from order confirmation to preparing, packaging and delivering. The solution supports real-time updates, notifications, and tracking of delivery personnel using google maps

EDUCATION

B.Tech: **Mathematics & Computer Science**, 2012
Federal University of Technology - Minna

CERTIFICATION

Oracle Certified Professional Java Programmer 2012
